

A photograph of a male worker in a dark blue Lineage Logistics cap and jacket, smiling while looking at a clipboard. He is in a large, brightly lit warehouse with high ceilings and industrial equipment. The image is partially obscured by a blue semi-transparent overlay containing the main headline.

Lineage Logistics opts for functionality, flexibility and continuous development.

Lineage Logistics is specialized in automated warehousing and frozen storage solutions for leading producers, retailers and wholesalers within the frozen food industry. The company has six large scale, state of the art freezer magazines in the Netherlands, Belgium and the United Kingdom. With a combined storage capacity of over 500,000 pallets, they support the full supply chain for its customers in Europe with warehousing, transportation and distribution services.

In 2016, Lineage Logistics went successful live with Boltrics' software for cold storage logistics in Gloucester (UK). The warehouse in Gloucester was the first site of Lineage Logistics which started using the WMS. Within record time, the other 5 sites in the UK, Belgium and the Netherlands were also updated to Boltrics' WMS.

Lineage Logistics always want to make use of the latest technical developments and innovations. That was also one of the main reasons why they choose for Boltrics' software and implemented the software in four major sites within only one year.

[“Lineage Logistics has selected Boltrics' WMS because the solution best caters for functionality, user friendliness, flexibility, architecture and continuous development. The system is highly advanced and will play a crucial role in the ever changing demands in the cold storage market where Lineage Logistics has to deal with.”](#)

[Fixed time, fixed price](#)

The implementation has been successful and without any significant interruptions in the operational process. Every project has been realized within only 3 to 4 months and within the agreed budget.

Peter Bryssinck, Implementation Manager at Lineage Logistics: “We are very pleased with the successful completion of our WMS implementations. The new system is highly advanced and will play a crucial role in the ever changing demands in the cold storage market where Lineage Logistics has to deal with.”

[Always up-to-date](#)

Peter continues: “Boltrics pushes us to update to the latest version of Dynamics 365 Business Central. That may sound negative, but in fact, we are pleased with this ‘pressure’. Because if you would skip an update, you’ll increase the workload over period and increase the risk of mistakes. The performance of the solution is key to our service, and we do not take any risk.”

“The partnership with Partner Logistics is of strategic importance to Boltrics because we have not yet automated these kinds of automated warehouses. With this project, we have proven that our standard industry solution can be used even in the most complex environments. It also proves that our fixed price, fixed time and always up-to-date approach work for both small and large logistics service providers,” said Jan-Cornell, Ekris, Commercial Director of Boltrics.

- 4 major sites went live in one year
- Within agreed timeframe and budget
Without interrupting the operational process

[About Lineage Logistics](#)

Since the Company's founding in 2008, Lineage has achieved sustained growth organically, through new construction and with acquisitions in the US and across the globe. This transaction builds on Lineage's multiple successful acquisitions in Europe, including Yearsley Group, the leading temperature-controlled logistics service provider and frozen food distributor in the UK, and Partner Logistics, a leading automated cold storage provider in Europe. Most recently, Lineage completed the acquisition of US-based Preferred Freezer Services, which enhanced the Company's presence in the U.S. and provided a new market entrance for the Company in Asia. Lineage globally now has over 1.4 billion cubic feet and nearly 40 million square feet of capacity across more than 200 facilities spanning North America, Europe and Asia to support customer supply chain needs worldwide.
