

DataHub

Communicate effortlessly and real-time
with the latest EDI technology.

Within the logistics sector, it is more and more about real-time, bi-directional exchange of data. Everything moves towards digital communication. Do your customers require that you use the latest EDI-technology? Do you already use EDI, but are you afraid that it no longer meets the increasing requirements? Or do you no longer want to be dependent on a third party for your EDI connection?

Get started with Boltrics' DataHub and simplify your work to create a transparent process. Give yourself the opportunity to reduce manual actions as much as possible and to reduce errors to a minimum.

Break through digital language barriers

A DataHub is a platform for organizing, managing, sharing, collaborating and processing data. In fact, it is a jointly managed, collaborative platform that makes it easier to process data. In other words: it offers users the possibility to have data processed automatically in your own system and that of customers. Boltrics takes care of the mapping of customer specific messages.

Always up-to-date with the latest technology

This solution is – like our other products – developed as a standard industry product. Based on our customers' input. We ensure that the connections are updated with each update and new items are added generically. This way, everyone benefits from each other's knowledge and you can always use the latest features.

Connect servers and technology

The solution works cross-border and allows different systems to communicate with each other effortlessly. Regardless of the underlying technology or on which server your solution runs. A future-proof platform that works as a hub to which you can connect all your clients.

A safe environment with Microsoft Azure

The solution is available in the secure cloud environment of Microsoft Azure. This means that not only your organization can access easily, but your clients as well. This facilitates an unambiguous information provision and prevents noise. It also offers the possibility to create and maintain a transparent process.

Explore benefits of the digital era

Boltrics' EDI solution, shaped by the DataHub, connects perfectly with Dynamics 365 Business Central. The result: entering data manually belongs to the past. The platform makes automated communication on a large scale possible. This results in convenience, efficiency, error reduction and transparency.

Prevent unnecessary costs and pay-per-use

The transparent price structure of this module is one of the many aspects that makes it unique. Do you send EDI messages on a regular basis? Then you choose a higher bundle than when you rarely communicate digitally with your customers. Do you expect a change in your volumes? Then you adjust the bundle for the next month. Clear, honest, and – thanks to sector wide input – also favorably priced.

Also send AS2-messages with our DataHub

When communicating via HTTP, many organizations make use of an AS2-encryption. Because of the volumes, costs might rise to unforeseen heights. But not with us. For AS2, you pay a monthly fee per partner. This way you keep the costs within boundaries.

All benefits together

- Effortless digital communication
- Process data automatically
- Always up-to-date software
- Communicate securely via the cloud
- No more manual registration
- Pay-per-use, even for frequently used messages

Our solution

Knowing that logistics service providers independently try to reinvent the wheel, inspired Boltrics to develop a branch standard. One solution that the entire branch puts its weight behind. A proven standard, always state-of-the-art solution – thanks to the development power of Microsoft Dynamics 365 Business Central. Fast, lean and decisively implemented by Boltrics, exactly according to plan. Without time-consuming customization.
